XR4DRAMA

XR4DRAMA is software toolkit for increasing situation awareness. It's designed for disaster managers, media production planners, and other professionals who need to know what's going on in a specific place at a specific time. The interactive, collaborative platform combines AI, IoT, NLProc, XR, multi modal data analysis and fusion tech as well as advanced semantic mapping, archiving, crowdsourcing, and task management features to achieve its aim: making sure users are fully informed, as safe as possible, and ready to make the right decisions.
